Professional Experience

Volvo Cars Corporation.

Gothenburg, Sweden

DevSecOps Developer

July 2024 – Present

- Improved security of in-car software by implementing unique UFW firewall rules for a host virtual machine (VM) with signing software and 8 nested VMs.
- Automated the process to copy signing ceremony logs and artefacts from Azure containers to AWS Deep Archive storage by creating an Azure VM that utilises cron schedule to run Relone daily.
- Configured a system to receive Blackduck monthly security scan reports by creating GitHub actions for 6 repositories.

Volvo Cars Corporation.

Gothenburg, Sweden

Software Development Global Graduate

August 2022 – June 2024

- Chosen from over 3000 applicants for a 24-month professional programme for high-achieving talent based on leadership potential and technical skills.
- Contributed to 8 projects in varying teams such as low-speed automatic driving, service design, software homologation, Android mobile app development, sustainability in design, web development, and secure development lifecycle.
- Participated in 5 week-long leadership workshops to expand knowledge car market trends and identified growth strategies to succeed in the automotive industry.

Tenchijin, Inc.

Tokyo, Japan

Software Engineer and Market Analyst Intern

Feb 2020 – August 2022

- Created an aircraft density prediction algorithm by applying Kalman filtering to over 100,000 aircraft and creating an API request for real-time calculation.
- Conducted soil temperature analysis for 3 locations in Japan with infrared data collected by the geostationary satellite Himawari.
- Won the 2021 Gravity Challenge in the Bx category out of 300 participants by proposing a strategy to analyse soil conditions between trees within orchards with satellite data.

Japan Aerospace Exploration Agency

Kanagawa, Japan

Supervisor Assistant

April 2021 – August 2022

- Analysed absorption models of 3 high energy astronomical events with advanced statistical tools developed by NASA.
- Investigated emissions of a low mass x-ray binary 7.1 kpc away by applying photoionised plasma model to fit 3 emission categories and considering emission regions of the accretion disk.
- Presented findings to 3 Japanese conferences and an international conference COSPAR (Committee on Space Research).

Skills

- Python
- Ansible
- Docker
- AWS (EC2, S3, IAM)
- Azure DevOps

Certificates

- CompTIA Security+ (2025)
- System Administration and IT Infrastructure Services (2025)
- Google Cybersecurity Certificate (2024)

Education

Tokyo Institute of Technology/Institute of Space and Astronautical Sciences (ISAS)

Tokyo, Japan

Master of Science in Physics

September 2022

Georgia Institute of Technology

Atlanta, GA

Bachelor of Science in Physics, minor in Global Development

May 2020

Honors & Awards

- Hitohiro Fukuyo Memorial Scholarship Award (2020)
- Gravity 03, Gravity Challenge (2019)
- Deutscher Akademischer Austauschdienst (German Academic Exchange Service) Undergraduate Scholarship (2019)
